Adds effervescence to life

Uses

- **Diarrhea:** Use of oral rehydration therapy has been estimated to decrease the risk of death from diarrhea by up to 93%.
- **Heat:** being exposed to high temperatures and/or high humidity makes it more important to stay hydrated. Add to your daily routine twice a day to ensure the right hydration level.
- **Physical exercise:** Use before & during a physical exercise to maintain your performance level. It also refuels your body after exercise.
- **Travelling:** especially during flights staying hydrated is difficult. To support your hydration level take before takeoff and before landing. The included B vitamins can also help reduce some of the jetlag symptoms like tiredness & fatigue.
- **Work:** A hectic work environment can lead to a lack of hydration which can affect your working performance. Take when thirsty or exhibiting first signs of dehydration.

- ✓ **Dissolves quickly and completely in contact with water**
- ✓ **Efficient means of ingesting nutrients**
- ✓ **Ideal for those who have difficulty swallowing**
- ✓ **Better taste than other products**
